

Final Defense Comments/Recommendations

Current System Operations:

- A daily charge of 10 pesos is applied every 24 hours.
- The system is configured to automatically generate and send email reminders. No manual intervention is required.
- The computation of the amount due is performed at closing time.

Future System Enhancements:

- Implementation of barcode-based time-in functionality.
- Integration with the registrar system via barcode technology.

Challenges and Considerations:

- Email Functionality: Restrict system-generated emails to the designated webmail service to ensure efficient management and avoid potential deliverability issues.

Data Management:

- Implement a data backup policy. Data older than one year should be archived or deleted if no longer required for operational or compliance purposes.

Documentation:

- Develop a comprehensive User Manual to facilitate system understanding and usage.
